Trellex Linings
for Concrete Mixers

EN

Trellex® Linings –the low cost alternative for your concrete mixer linings

Since the end of the 1960s, we have developed and produced linings for concrete mixers and other applications in the aggregates and Cement Industry. Today, we can offer complete lining systems including paddles and arm protection for both pan and drum mixers. Our range of linings covers most brands.

Lower costs

Trellex wear-resistant material has been specifically developed to meet high demands, and last considerably longer than comparative steel linings.

High availability

The unique properties of the Trellex lining translates direct to longer lifespan, less maintenance and replacing of worn-out wear parts. All together returns to minimise downtime and loss of production.

Trellex linings are manufactured in both rubber and polyurethane and can be fitted quickly and simply by using our unique fixing system.

Easy to handle

Rubber and polyurethane are lightweight materials having only a fraction of the weight compared to steel. This means that Trellex linings are easy to handle and easy to fit. Lifting heavy objects with the consequent risk of personal injury during the installation process is therefore considerably reduced.

Improved working environment

Rubber and polyurethane are, besides being wear resistant, very effective materials for absorbing sound and vibrations – important

features for creating a better working environment. In various tests, the noise level recorded from a drum mixer was reduced by 10 dB(A), with a Trellex lining. This effectively reduces the noise level to the human ear by half.

Trellex paddle system

Trellex rubber and polyurethane paddles are specially designed and adapted for most brands of pan mixers. Trellex paddles can be used together with all type of linings.

And apart from their long service life, the flexibility and elasticity of the paddles reduces the wear and tear of the mixer lining.

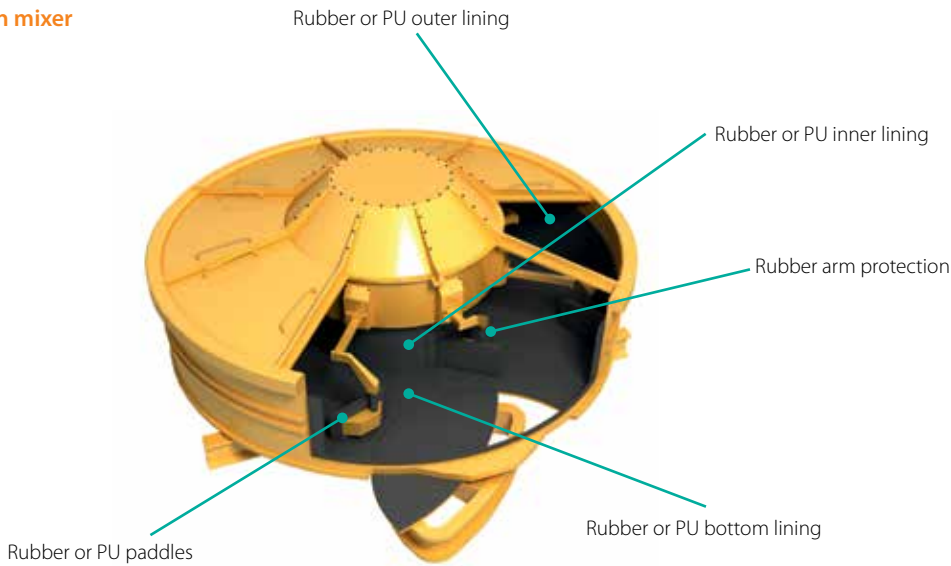

The unique Trellex paddle system means reduced downtime and a better lining economy.

Trellex linings for concrete mixers means :

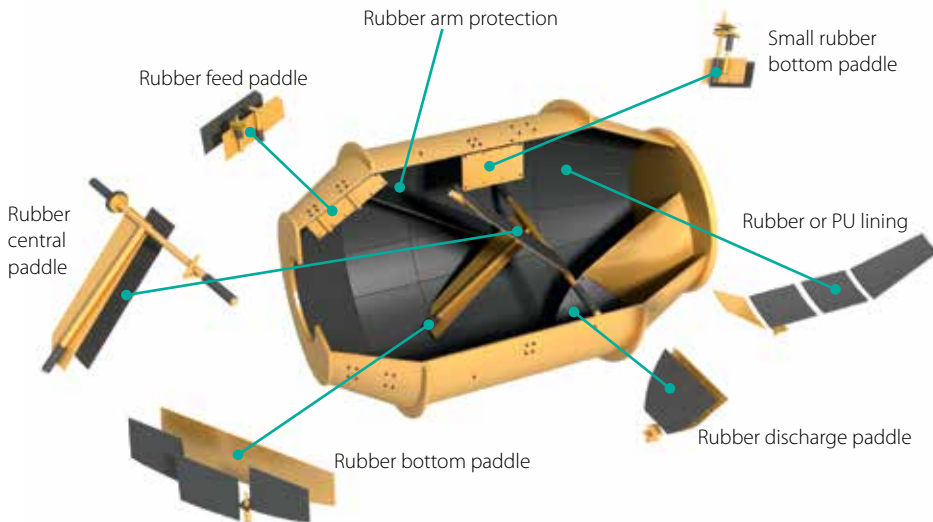

- High availability
- Easy cleaning
- Reduced noise level
- Safe and simple fitting
- Long service life

Pan mixer

Drum mixer

The Trellex paddle range cover most pan mixers brands as Hilac, Liebherr, Schlosser, Waimer, Ibag, Skako, Eirich, Teka, Comflow, Rapid, Haarup, Elba, Fejmert, etc.
