

| Inline Connector Cable Environmental Cap

Itron's environmental cap incorporates a compressible rubber O-ring seal that when inserted into the mating male half inline connector, provides a secondary sealing barrier to ensure waterproof protection when an ERT® module is not immediately attached. Additionally, the cap guards against water pit substance contamination to ensure a smooth and easy mating of the connector system components at a future date.

The environmental cap is supplied with each inline connector cable however additional caps may be ordered separately.
